Work Experience

Bank of America

July 2024 – Present

Software Development Engineer-1

Hyderabad

- **Automated JIRA ticket creation** across team space using Python + REST API → saved **15+ hours/week** of 2 team members.
- Built central **database sync system (Python + SQL)** from multiple sources → eliminated 5 hours of manual updates.
- Reduced release coordination effort by **50% via Node.js automation** across 4 engineering teams and stakeholders.
- Maintain secure password management system **syncing backend + database** across applications, through **OpenShift** update.
- Participated in the development of a **Java-based audit report generator** with validation logic to streamline compliance.

Projects

Online Compiler Web App — Docker, Express.js, JWT, MongoDB, REST API, OpenAI API

[Source Code](#)

- An **AI powered** text editor, with OpenAI API chatbot
- It allows **safe user login and registration** powered by **JWT**
- Letting users to write, compile and **run code in C++, Python and Java**.
- It allows users to **save code** to their profile, **download code** to their local and **view execution history**.
- The application has been containerized in **Docker** to ensure **clean execution and security**. The application is primarily written in **Express.js** and **stores data with MongoDB**.

ML-Based Behavioral Antivirus — Python, Scikit-Learn, Pandas

[Source Code](#)

- A demonstration of effectiveness of using ML based system at **identifying malware**.
- It dynamically trains 5 different ML learning mechanisms and **selects the winner algorithm** from the train data set and uses it to identify malware.
- It had **99.4% success rate** of malware detection with this winner algorithm.
- Primary tech-stack used was Python and its **package Scikit-Learn for ML, and Pandas for ETL**

QKD + Blockchain Data storage System — Python, Solidity, web3

[Source Code](#)

- A **Quantum-Safe** encryption layer on top of classic AES with QKD was simulated. For the simulation **Python and its web3 and Solidity** packages were utilized
- It operates by simulating a QKD like-logic on the AES module of python, it then encrypts the data, with this additional layer. This is then stored in a **Blockchain** and then put through a **hash function** before it is stored.
- This architecture ensures a **100% unbreakable encryption** which also takes into consideration the **integrity of data**.

Technical Skills

Languages: Python, TypeScript, Java, C++, Go, Bash

Frameworks and Libraries: Django, Node.js, Express, React

Databases: PL/SQL, MongoDB

Tools: Docker, Git, REST API, AWS, JIRA, SQL, OOP, DSA (200+ LeetCode), ETL, CI/CD, Postman

Honours and Awards

Silver Global Recognition Award

Dec 2025

Bank of America

- I was awarded this recognition for my technological contribution to various lines of business through my team, in the year of 2025, by my managers.

Leap Programming Camp

April 2025 – present

AlgoUniversity (backed by Y-Combinator)

- Got selected being in top **10%** applicants of the 1000, got mentorship under the seniors engineers of Apple, Google, Grab Singapore and Alphagrep Singapore.
- Boosted my knowledge of building Scalable Systems, Deployments and build end to end application

Education

Vellore Institute of Technology, Chennai

2020 - 2024

B.Tech in Computer Science & Engineering

8.69/10 CGPA
